voltsolenergy.com

Status

Site live · 200 CA cities indexed

WHY THIS MATTERS

The website is built. Now we win local search.

Your site is now a fully-built local-SEO engine: 200 California city pages, 28 in-depth guides, and complete structured data (including your CSLB license). Google has everything it needs *on the page*.

What moves you up the rankings from here is **off-site authority** — the signals Google trusts most for local businesses: a verified Google Business Profile, consistent listings across the web, and real customer reviews. Those require your real-world accounts, so this pack hands you each step, ready to execute.

One golden rule: Your **NAP** — that's your **N**ame, **A**ddress, and **P**hone number — must be **identical everywhere** it appears online. Google cross-checks listings against each other, and even small differences ("St." vs "Street," or a different phone format) dilute your authority. Use the exact strings below, every time.

SECTION 0

Your canonical business info (your NAP)

NAP = Name, Address, Phone — the core identity details Google uses to recognize and trust your business. Copy these exact values into every listing.

Business name	VoltSol Energy
Phone	(530) 228-1019
Website	https://voltsolenergy.com
Email	info@voltsolenergy.com
Service area	California (Sacramento & NorCal core; statewide via installer network)
CSLB License #	1148585 (Contractors State License Board)
Primary category	Solar energy contractor
Address	To confirm — see note below

If VoltSol operates from a home or non-storefront, set the profile as a **Service-Area Business (SAB)** — that's Google's setting for businesses that travel to customers rather than having a storefront people visit. With it, you hide the street address and list the service-area cities instead. **Never use a fake or virtual address** — Google suspends listings for it.

SECTION 1

Google Business Profile — listing copy

Your Google Business Profile (often shortened to **GBP**) is the free listing that puts your business on Google Search and Google Maps — the box with your name, reviews, hours, and a map pin. This is the single highest-impact item in the entire pack. Claim it at business.google.com and paste in the following.

Categories

Primary Solar energy contractor

Also add Solar energy equipment supplier · Solar panel maintenance service · HVAC contractor (for the mini-split work)

Service-area business

Yes — set service areas to the cities you actually serve: Sacramento, Roseville, Rocklin, Folsom, Auburn, El Dorado Hills, Davis, Elk Grove, plus any Bay Area / Central Valley cities you cover.

Business description (fits Google's 750-char limit)

VoltSol Energy installs off-grid and hybrid solar power systems for California homes — solar panels, EG4 hybrid inverters, EG4 LiFePO4 battery storage, and energy-efficient mini-split heat pumps. Complete systems start at \$8,700, all-in. We help homeowners cut PG&E bills, gain protection from PSPS blackouts, and lock in energy costs against future rate hikes. Licensed (CSLB #1148585), local, and straightforward — free estimates with no pressure. Serving Sacramento, Placer, El Dorado, the Bay Area, and the Central Valley.

Acronyms in the copy above, explained: **PG&E** = Pacific Gas & Electric (the local utility). **PSPS** = Public Safety Power Shutoff (the planned blackouts the utility triggers during fire risk). **CSLB** = Contractors State License Board (California's contractor licensing body). **LiFePO4** = lithium iron phosphate, the safe, long-life battery chemistry VoltSol uses.

Services to add

- **Off-Grid Solar Installation** — Complete solar + battery systems for energy independence.
- **Hybrid Solar + Battery Storage** — Solar panels paired with EG4 LiFePO4 batteries and a hybrid inverter.
- **Solar Battery Backup** — Blackout / PSPS protection with EG4 battery storage.
- **Solar Mini-Split Heat Pump Installation** — Efficient heating + cooling powered by solar.
- **Free Solar Estimate** — No-obligation home assessment and quote.

Also fill in

- **Opening date** — your business start year.
- **Hours** — e.g. Mon–Fri 8am–5pm ("by appointment" is fine for a service-area business).

- **Attributes** — toggle on any that are true: Online estimates, Onsite services, Licensed, Veteran-owned / Family-owned.

Photos (Google rewards profiles with 10+)

- Logo + a cover photo (hero install shot)
- 3–5 completed install photos: panels on roof, EG4 battery + inverter on the wall, indoor mini-split head
- Your portrait / team photo
- A truck / van or branded-gear shot if you have one

Products (optional — mirrors the website pricing tiers)

Tier	System	Price
First Light	12K single-zone	from \$8,700
Sunbeam	24K system	(confirm)
High Noon (Most Popular)	24K multizone	(confirm)
Solar Flare	36K system	up to \$16,000

SECTION 2

Verifying your profile

Google verifies via postcard (mailed PIN, ~5–14 days), phone, or video. Steps:

1. Claim the listing at business.google.com.
2. Request verification (postcard is most common for service-area businesses).
3. Enter the PIN when it arrives.

Important: your listing won't appear in Maps or show rich results until it's verified. Start this first — the postcard wait is the long pole.

SECTION 3

Your first 5 reviews

Real Google reviews unlock the gold star rating in search results. (The website's rating *structured data* — the behind-the-scenes code that tells Google about your ratings — is already wired up, but Google only displays stars sourced from *real* reviews.) After verification, text or email your happiest recent customers a direct review link from the profile's "Ask for reviews" tool. Aim for **5+ in the first month**.

A ready-to-send ask

"Hi [name] — thanks again for trusting VoltSol with your solar install. If you have 30 seconds, a quick Google review really helps a small local business like ours. Here's the link: [review link].
Thank you! — Hugo"

SECTION 4

Citation list — list VoltSol here

A **citation** is simply your business listed on another website (a directory) with your NAP. The more reputable sites that list you with *consistent* details, the more Google trusts you. Submit the **identical NAP** (Section 0) to each site below. Consistency matters more than volume — work top-down.

TIER 1 — HIGHEST AUTHORITY, DO FIRST

#	Site	Where
1	Bing Places for Business	bingplaces.com (can import from Google)
2	Apple Business Connect	businessconnect.apple.com (Apple Maps)
3	Yelp	biz.yelp.com (huge for home services)
4	Nextdoor Business	business.nextdoor.com (neighborhood — ideal for solar)
5	Facebook Business Page	facebook.com

TIER 2 — SOLAR / HOME-SERVICE VERTICALS

#	Site	Where
6	EnergySage	energysage.com (solar marketplace)
7	SolarReviews	solarreviews.com
8	Angi	angi.com
9	Houzz	houzz.com (home improvement)
10	Thumbtack	thumbtack.com

TIER 3 — GENERAL DIRECTORIES

#	Site	Where
11	Better Business Bureau	bbb.org
12	Yellow Pages	yellowpages.com
13	Manta	manta.com
14	Chamber of Commerce	local Sacramento / Placer chamber

SECTION 5**Your action checklist**

- ☐ Claim & verify the Google Business Profile (start the postcard now)
- ☐ Decide address strategy (hidden service-area vs. storefront)
- ☐ Confirm business hours + opening year
- ☐ Gather 5–8 photos for the profile
- ☐ Send the first 5 review requests after verification
- ☐ Work the Tier 1 citation list (5 sites)

If you do just one thing: claim and start verifying the Google Business Profile. It's the single biggest lever for local solar leads, and the postcard PIN takes up to two weeks — so the clock starts the day you request it.
